Professional Summary

Innovative and strategic **Data Scientist** with over 6 years of experience designing scalable machine learning models, deploying predictive analytics pipelines, and translating complex datasets into actionable business intelligence. Proven track record of navigating ambiguity, optimizing algorithmic performance, and leading cross-functional data initiatives from conception to production.

Technical Skills

- **Languages & Frameworks:** Python, R, SQL, Scala, PySpark, TensorFlow, PyTorch, Scikit-Learn
- **Data Engineering & Big Data:** Apache Spark, Kafka, Airflow, Hadoop, Snowflake, BigQuery, AWS (S3, EC2, SageMaker)
- **Databases & Tools:** PostgreSQL, MongoDB, Git, Docker, Kubernetes, Tableau, PowerBI
- **Core Competencies:** Predictive Modeling, Natural Language Processing (NLP), A/B Testing, Time Series Forecasting, Deep Learning

Professional Experience

Senior Data Scientist

Apex Analytics Solutions — Ithaca, NY

January 2023 – Present

- Architected and deployed a deep learning recommendation engine using PyTorch, resulting in a **24% increase** in user engagement across mobile platforms.
- Spearheaded migration of legacy data pipelines to a cloud-native Snowflake and Apache Airflow architecture, reducing query latency by **40%**.
- Mentored a team of 4 junior data scientists, establishing code review standards and MLOps best practices.
- Collaborated with product and executive leadership to define KPI metrics, conducting rigorous A/B tests that optimized marketing spend efficiency by **18%**.

Data Scientist

Argonaut Data Labs — Sparta, CA

August 2020 – December 2022

- Developed and maintained predictive churn models utilizing XGBoost and Random Forest classifiers, saving an estimated **\$1.2M** in annual recurring revenue.
- Built automated ETL data ingestion pipelines in Python and SQL, processing over **50 million daily user events**.
- Designed interactive executive dashboards using Tableau to visualize customer segmentation trends and operational bottlenecks.
- Implemented NLP text-classification models to automatically categorize customer support tickets, reducing manual routing time by **35%**.

Education

Master of Science in Data Science

Hellas Institute of Technology — Athens, Greece

Graduated: June 2020

- **Focus:** Machine Learning, Statistical Inference, and Big Data Architecture.
- **Thesis:** "Navigating High-Dimensional Datasets: Optimizing Feature Selection in Stochastic Environments."

Bachelor of Science in Applied Mathematics & Statistics

University of Troy — Troy

Graduated: June 2018

Projects & Publications

- **Odyssey-Net (Open Source):** Developed an open-source Python library for anomaly detection in time-series data using transformer architecture. Achieved over **1,200 stars** on GitHub.
- **Predictive Weather Routing Model:** Created an ensemble machine learning model to predict optimal maritime transit routes based on historical meteorological and oceanographic data.
